 Cleanser-applicator pad - has recesses to contain substance for
 application in concentrated form, ready for application once diluted
 C91-087506

A cleanser/applicator pad consists of a block (3) of an absorbent material, joined to a pad (4) of a porous material which has recesses in its surface adjacent to the joint (1) to contain a substance which is soluble in an appropriate liquid (e.g. water) and is then applied in solution through the pad. The substance to be applied is contained in a concentrated or solid form in recesses (9) which can be in a variety of shapes.

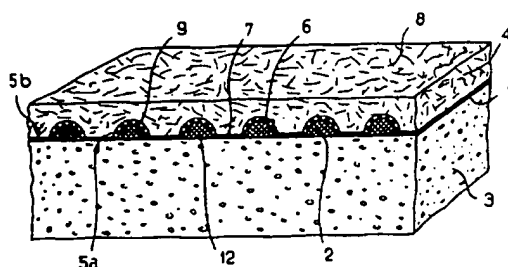

The porous pad can be of a sponge or foam material with open cells, or made from fibres which may (not) be woven or knitted, while the block (3) is made from a closed cell polymer foam, such as polyethylene or poly-methane.

USE/ADVANTAGE

E.g. for cleaning the skin, applying wax or sun lotions, or for cleansing wounds, is ready to use and

A(12-S4, 12-V3A, 12-V4C) D(8-B9A)

convenient to apply. (26pp1439PADwgNo1/7).
